Did You Know Your On-Site Shredding May Be Converted to an Off-Site Contract?

Stericycle, the largest medical waste disposal company in the world recently acquired Shred It, the largest on-site shredding company in the world.

While built on the slogan "on-site done right", the

company announced a deliberate move to convert all Shred-It clients from on-

site to off-site shredding.

The announcement was made during an Earnings Report Conference Call on April 28, 2016. The statement below is taken directly from Stericycle Inc. Earnings Report: Q1 Conference Call Transcript.

"Then you notify the customer. So you're notifying all the customers that are currently on-site and you are letting them know that we are going to be switching their service from on-site shredding with a truck that has a shredder on it, to taking that back to our facility and shredding it back at our facility."

The Mobile Shredding Association categorically opposes any effort to diminish the value of on-site, witnessed secure document destruction.

On-Site shredding is a much safer option because the customer is able to view the entire process eliminating the inherent risk in taking your paper off-site. Some of the off-site risks are the truck doors opening in transit allowing paper to blow out, an accident resulting in the exposure of confidential data, or intentional identity theft by employees - all of which have occurred in recent news.

Cell Phone Radiation Increases Radiation in Rats, but Should We Worry?

Most studies on cell phone radiation and cancer are not reliable because studying people is less controlled than studying rats. Results tend to vary and are not reliable.

However, in the latest rodent study released, researchers gave rats radiation every day for two years and compared them to rats that did not receive radiation. The study looked at tumors formed in the brain and heart.

Researchers found that 2-3% of the hundreds of male rats that were exposed to radiation developed brain tumors. None of the controlled rats developed tumors. The female rats who developed these cancers was even less.

Could Outrageous Airline Fees Be Going Bye-Bye?

Airlines love to tack on irrational high fees. But can passengers do anything about it? Many outrageous fees are being reduced and even eliminated in the past few weeks. Great news for summer travelers!

"Some of these fees were irrationally punitive," says George Hoffer, a transportation economist at the University of Richmond."

North American's airlines reportedly brought in close to \$11 billion in extra fees last year! While we are seeing a trend to reduce fees, we likely won't see them go away without government involvement.

Some examples are Delta charging a \$25 fee to book a ticket by phone. United Airlines charges a \$50 processing fee for tickets refunded for events such as jury duty, illness or death.
